REVEEL

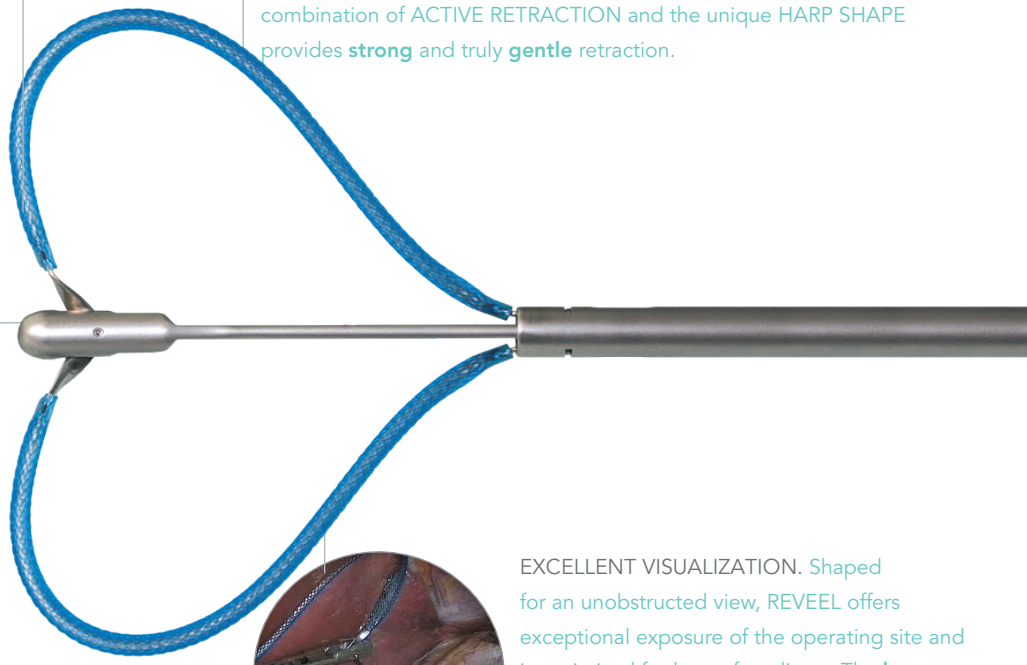
ENDOSCOPIC RETRACTOR

Radically Rethinking Endoscopic Retraction

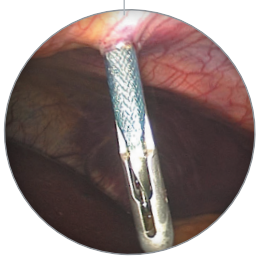
INTRODUCING REVEEL

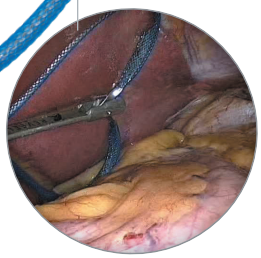
GENTLE. Surface with a Coefficient of Frictions (COF) 171% greater than traditional metallic retractors[1]. Using REVEEL results in: **less retraction force**; reduced possibility of inadvertent crushing of the liver; **less slippage**; and **less frustration** for the surgeon.

ACTIVE TRACTION. Patented retraction surface that really "sticks" to the liver and stops it from sliding around during the procedure. The combination of ACTIVE RETRACTION and the unique HARP SHAPE provides **strong** and truly **gentle** retraction.



PERCUTANEOUS. There is no need for additional trocars when using REVEEL. With the same diameter as an industry standard 5mm cannula, REVEEL's profiled tip facilitates easy, low-force insertion, while the internal seals help maintain pneumoperitoneum and prevent messy fluid leaks.





EXCELLENT VISUALIZATION. Shaped for an unobstructed view, REVEEL offers exceptional exposure of the operating site and is optimized for large, fatty livers. The **harp shape** and rigid **central i-beam** enables the liver to be well-mobilized and prevent the left lobe from falling into the field of view.

ORDERING INFORMATION FOR REVEEL:

RV093001 SINGLE USE (6 Per Box)
Percutaneous - inserted via a 5mm incision (heart width 90mm, working length 310mm)

RT083001 SINGLE USE (6 Per Box)
Trocar Compatible* - 5mm trocar compatible, inserted via a trocar or percutaneously. (heart width 80mm, working length 300mm)

***Compatible with industry leading 5mm trocars**

ERGONOMICS. Comfortable, intuitive, and easy to use handle. Pull-and-go actuation allows the retraction surface to be locked in the desired shape. One-touch QUICK RELEASE mechanism allows for safe, rapid deactivation.
